D. Follow the clues and write the name of each insect in the puzzle.

**Across**

- 1. adult female lays her egg in the ground
- 3. pollinates flowers and is example of complete metamorphosis
- 5. makes a cold light and is fun to watch
- 6. example of single metamorphosis; adult female lays eggs in water; the nymphs eat water insects

**Down**

- 2. lives in a colony; most make nest in ground in form of "hill"; stores food
- 3. useful to man; pollinates flowers; can sting; makes honey
- 4. eats aphids; very useful to man in the garden
